LIGHT SHEER™ HAIR REMOVAL LASER

Posttreatment recommendations

POST TREATMENT INFORMATION

- You may return to normal activity immediately post treatment.
- A **mild sunburn-like sensation** is expected. Areas may initially appear red which usually resolves in a few hours, but can last a couple of days. Occasionally some areas may have small red bumps (similar to bug bites). This usually resolves in a few days to a week. Rarely, blisters may form on the skin. If this occurs, topical antibiotic ointment (e.g., Bacitracin, Polysporin, Neosporin) should be applied often to blistered areas until they heal.
- Treated areas can be washed with a **gentle fragrance-free cleanser** (e.g., Cetaphil, Purpose, Neutrogena) and topical antibiotic ointment may be applied to any crusted areas until healed.
- Apply a sunscreen with an SPF of 15 or higher daily to the sun-exposed skin, and avoid excessive sun exposure to the treated areas.

If you have any questions or concerns, please call our office at (909) 981-8929.
