Light Sheer Hair Removal Laser

FOR HAIR REMOVAL

PRETREATMENT RECOMMENDATIONS

- The treatment area should be shaved or closely clipped before each treatment. Keep in mind that it might be difficult to determine the borders of your area of excess hair growth, so please take careful note of these borders prior to shaving.
- Refrain from tweezing, waxing, sugaring, electrolysis or other epilation methods for at least 4 weeks prior to treatment and for the duration of treatments.
- We recommend that you discontinue sun tanning, the use of sun-tanning beds and self tanning cream 4 weeks before and throughout the treatment course. This will reduce the chance of skin color changes and the development of new lesions.
- Always use an SPF 15 or higher sunscreen on all exposed treatment areas, liberally reapplying throughout the day. Wear protective, light-occluding hats and clothing.
- Discontinue the use of exfoliating creams such as Retin-A (tretinoin) and other skin exfoliating products to the areas to be treated 3 days prior to treatment.
- If you have a history of herpes simplex outbreaks (cold sores) in the area of treatment please notify us. Medication can be prescribed by us to decrease the chances of an outbreak occurring.
