

- 7. What is the recovery like?** The patient is red and can be swollen the next day. On the second, third and fourth day the patient is peeling and can experience a little itchiness typical to a sunburn.
- 8. When do you see the results?** Right away! When we are doing the procedure you can immediately see the skin contract and shrink. The patient will really see the benefits by the time the skin is completely peeled and will continue to see results for up to six months with new collagen regeneration that “plumps” up the skin.
- 9. Who is the best candidate for this procedure?** There are three separate groups the MiXto applies to, the younger patient with severe acne scars, the middle-aged patient with wrinkles and age spots and the older patient with wrinkles, age spots and pre-cancerous lesions.
- 10. How many treatments are needed?** In most cases only one, but for deeper wrinkles and acne scars two or more treatments.
- 11. Is it just for the face or can it be used on other areas of the body?** It is most commonly used on the face but can be used on neck, chest, arms and hands.
- 12. Is the treatment expensive?** The new technology has actually brought the price down due without the compromising the results.
- 13. What is the cost?** MiXto treatments are generally under \$3000.00 for a one-time full-face treatment.
